

Thermogenesis Corp. (KOOL): Thermogenesis is a supplier of proprietary products and services that process and store adult stem cells for treatment of disease and injury. Products include: The BioArchive System, an automated cryogenic device used by cord blood stem cell banks in more than 25 countries for cryopreserving and archiving cord blood stem cell units for transplant. The AXP AutoXpress Platform is a proprietary family of automated devices that includes the AXP and the MarroXpress and companion sterile blood processing disposables for harvesting stem cells in a closed system. The CryoSeal FS System is an automated device and companion sterile blood processing disposable used to prepare fibrin sealants from plasma in about an hour. The Thrombin Processing Device is a sterile blood processing disposable that prepares activated thrombin from a small aliquot of plasma in less than 30 minutes.

Early in 2008 Thermogenesis announced the creation of Vantus, a laboratory service company focused on the performance equine market, including Thoroughbreds, American Quarter Horses, Arabians and Warm Bloods. Under this collaboration, the Thermogenesis MarroXpress System and BioArchive System will be used for processing and storage of the stem cells. The Company is currently refining collection methodologies at breeder farms in California and processing methods at UC Davis. Vantus expects to be in operation at the beginning of the foaling season in January of next year.
